Marbrofin® X

Marbrofin® X is a non-wax , aggressive acid compound for the polishing and hardening of **marble, travertine, limestone** and **terrazzo** surfaces.

This product should only be used by professionals

Marbrofin® X:

1. Eliminates grout haze on newly installed marble surfaces.
2. Polishes, hardens, enhances the color and protects marble surfaces
3. Does not reduce the gloss of new highly polished marble surfaces.

To apply Marbrofin® X you will need:

1. Marbrofin® X compound
2. 175 RPM weighted floor buffer equipped with a water tank and splash guard
3. Natural hair and white buffing pads
4. Wet vacuum cleaner, mop, bucket, wringer, floor squeegee

Note: Strip off all wax and sealers from the stone with Zoom and neutralize.

DIRECTIONS: OPTION I: WET POLISHING

1. Cover baseboard, carpet, etc., with protective plastic and/or tape.
2. Wet marble surface. Sprinkle Marbrofin® X powder on the floor (5 oz./25 sq. ft.) over an area of about 25 sq. ft. at a time.
3. The Marbrofin® X/water mixture should make a wet slurry. Buff the Marbrofin® X mixture with a natural hair pad for 10-15 minutes.
4. Check the level of gloss with the squeegee. When the desired level of gloss is achieved, squeegee the Marbrofin® X mixture to the adjacent area and repeat process. Add Marbrofin® X and water as needed.
5. Vacuum dry the Marbrofin® X mixture. Flood rinse the polished area and buff again with the same pad without adding more Marbrofin® X.
6. Vacuum-dry, damp mop and let dry.
7. Buff polished area with a dry white pad.

For older marble and uneven floors (lippage), diamond grinding may be necessary before using Marbrofin® X.

Technical Specifications:

Active Ingredients: Magnesium Fluorosilicate, Oxalic acid pH: 2

Usage:

100 to 150 sq. ft./ Lb.

For further specifications see Safety Data Sheet

This product should only be used by professionals.

Store in a dry place.
